Treasury Management Update

Quarter Ended 30th June 2023

The CIPFA (Chartered Institute of Public Finance and Accountancy) Code of Practice for Treasury Management 2021 recommends that members be updated on treasury management activities at least quarterly. This report, therefore, ensures this Council is implementing best practice in accordance with the Code.

1. Economics update – provided the Councils Treasury Advisors

- The first quarter of 2023/24 saw:
 - A 0.2% m/m rise in real GDP in April, partly due to fewer strikes;
 - CPI inflation falling from 10.1% to 8.7% in April, before remaining at 8.7% in May. This was the highest reading in the G7;
 - Core CPI inflation rise in both April and May, reaching a new 31-year high of 7.1%;
 - A tighter labour market in April, as the 3 month year on year rate (3myy) growth of average earnings rose from 6.1% to 6.5%;
 - Interest rates rise by a further 75bps over the quarter, taking Bank Rate from 4.25% to 5.00%;
 - 10-year gilt yields nearing the “mini-Budget” peaks, as inflation surprised to the upside.
- The recent resilience of the economy has been due to a confluence of factors including the continued rebound in activity after the pandemic, households spending some of their pandemic savings, and the tight labour market and government handouts both supporting household incomes. That said, as government support fades, real household incomes are unlikely to grow rapidly. Furthermore, higher interest rates will mean GDP is likely to contract later this year. Our central assumption is that inflation will drop to the 2.0% target only if the Bank triggers a recession by raising rates from 5.00% now to at least 5.5% and keeps rates there until at least mid-2024.
- CPI inflation stayed at 8.7% in May (consensus 8.4%) and, perhaps more worryingly, core CPI inflation rose again, from 6.8% to a new 31-year high of 7.1%. The rise in core inflation built on the leap from 6.2% in March to 6.8% and means it is accelerating in the UK while it is slowing in the US and the Euro-zone (both fell to 5.3%). A further decline in fuel inflation, from -8.9% to -13.1%, and the second fall in food inflation in as many months, from 19.3% to 18.7%, explained why overall CPI inflation didn't rise. And the scheduled fall in the average annual utility price from £2,500 to £2,074 on 1st July means overall CPI inflation will probably ease in the coming months. But the problem is that the recent surge in core inflation and the reacceleration in wage growth shows that domestic inflationary pressures are still strengthening.
- This suggests the Bank may have more work to do than the Fed or ECB. Indeed, the Bank of England sounded somewhat hawkish in the June meeting. This came through most in the MPC's decision to step up the pace of hiking from the 25bps at the previous two meetings. The 7-2 vote, with only two members voting to leave rates unchanged at 4.50%, revealed support for stepping up the fight against high inflation.
- That said, the Bank has not committed to raising rates again or suggested that 50bps rises are now the norm. What it did say was that “the scale of the recent upside surprises in official estimates of wage growth and services CPI inflation suggested a 0.5 percentage point increase in interest rates was required at this particular meeting”. Moreover, the Committee did not strengthen its forward guidance that any further rate hikes would be conditional on the data. However, it looks highly probable, given the on-going strength of inflation and employment data, that the Bank will need to raise rates to at least 5.5% and to keep rates at their peak until the mid-point of 2024. We still think it is only a matter of time before the rise in rates weakens the economy sufficiently to push it into recession. That is why instead of rising to between 6.00%-6.25%, as is currently priced in by markets, we think rates are more likely to peak between 5.50-6.00%. Our forecast is also for rates to be cut in the second half of 2024, and we expect rates to then fall further than markets are pricing in.
- Growing evidence that UK price pressures are becoming increasingly domestically generated has driven up market interest rate expectations and at one point pushed the 10-year gilt yield up to 4.49% in late June,

very close to its peak seen after the “mini-budget”. Yields have since fallen slightly back to 4.38%. But growing expectations that rates in the UK will remain higher for longer than in the US mean they are still more than 70 bps above US yields. While higher interest rates are priced into the markets, the likely dent to the real economy from the high level of interest rates is not. That’s why we think there is scope for market rate expectations to fall back in 2024 and why we expect the 10-year PWLB Certainty Rate to drop back from c5.20% to 5.00% by the end of this year and to 4.20% by the end of 2024.

- The pound strengthened from \$1.24 at the start of April to a one-year high at \$1.26 in early May, which was partly due to the risks from the global banking issues being seen as a bigger problem for the US than the UK. The pound then fell back to \$1.23 at the end of May, before rising again to \$1.28 in the middle of June as the strong core CPI inflation data released in June suggested the Bank of England was going to have to raise rates more than the Fed or ECB in order to tame domestic inflation. However, sterling’s strong run may falter because more hikes in the near term to combat high inflation are likely to weaken growth (and, hopefully, at some point inflation too) to such a degree that the policy rate will probably be brought back down, potentially quite quickly, as the economic cycle trends downwards decisively. This suggests that additional rate hikes are unlikely to do much to boost the pound.
- In early April, investors turned more optimistic about global GDP growth, pushing up UK equity prices. But this period of optimism appears to have been short-lived. The FTSE 100 has fallen by 4.8% since 21st April, from around 7,914 to 7,553, reversing part of the 7.9% rise since 17th March. Despite the recent resilience of economic activity, expectations for equity earnings have become a bit more downbeat. Nonetheless, further down the track, more rate cuts than markets anticipate should help the FTSE 100 rally.

MPC meetings 11th May and 22nd June 2023

- On 11th May, the Bank of England’s Monetary Policy Committee (MPC) increased Bank Rate by 25 basis points to 4.50%, and on 22nd June moved rates up a further 50 basis points to 5.00%. Both increases reflected a split vote – seven members voting for an increase and two for none.
- Nonetheless, with UK inflation significantly higher than in other G7 countries, the MPC will have a difficult task in convincing investors that they will be able to dampen inflation pressures anytime soon. Talk of the Bank’s inflation models being “broken” is perhaps another reason why gilt investors are demanding a premium relative to US and Euro-zone bonds, for example.
- Of course, what happens outside of the UK is also critical to movement in gilt yields. The US FOMC has already hiked short-term rates to a range of 5.00%-5.25%, but a further increase is pencilled in for July, whilst the ECB looks likely to raise its Deposit rate at least once more to a peak of 3.75%, with upside risk of higher to come.

2. Interest rate forecasts

The Council has appointed Link Group as its treasury advisors and part of their service is to assist the Council to formulate a view on interest rates. The PWLB rate forecasts below are based on the Certainty Rate (the standard rate minus 20 bps) which has been accessible to most authorities since 1st November 2012.

The latest forecast, made on 26th June, sets out a view that both short and long-dated interest rates will be elevated for some little while, as the Bank of England seeks to squeeze inflation out of the economy, against a backdrop of a stubbornly robust economy and a tight labour market.

Link’s forecasts have steadily increased during the quarter as the data continued to spring upside surprises, and the Bank of England continued to under-estimate how prevalent inflation is, and how tight the labour market is. The Government has also noted that despite immigration increasing markedly, high levels of ill-health amongst the workforce has led to wage demands remaining strong until such time as there is a loosening in demand for business services.

Link’s current and previous PWLB rate forecasts below are based on the Certainty Rate.

- LIBOR and LIBID rates ceased at the end of 2021. In a continuation of previous views, money market yield forecasts are based on expected average earnings by local authorities for 3 to 12 months.
- The Link forecast for average earnings are averages i.e., rates offered by individual banks may differ significantly from these averages, reflecting their different needs for borrowing short-term cash at any one point in time.

A SUMMARY OVERVIEW OF THE FUTURE PATH OF BANK RATE

- Link's central forecast for interest rates was previously updated on 25th May and reflected a view that the MPC would be keen to further demonstrate its anti-inflation credentials by delivering a succession of rate increases. This has happened to a degree, especially as it moved to a more aggressive 0.5% hike in June but, with inflation remaining elevated, they anticipate that Bank Rate will need to increase to at least 5.5%, if not higher, to sufficiently slow the UK economy and loosen the labour market.
- Moreover, Link also still anticipate the Bank of England will be keen to loosen monetary policy when the worst of the inflationary pressures are behind us – but timing on this will remain one of fine judgment: cut too soon, and inflationary pressures may well build up further; cut too late and any downturn or recession may be prolonged. Link's current judgment is that rates will have to increase and stay at their peak until the second quarter of 2024 as a minimum.
- In the upcoming months, Link's forecasts will be guided not only by economic data releases and clarifications from the MPC over its monetary policies and the Government over its fiscal policies, but also international factors such as policy development in the US and Europe, the provision of fresh support packages to support the faltering recovery in China as well as the on-going conflict between Russia and Ukraine and whether there are any further implications for Russia itself following the recent aborted mutiny by the Wagner group.
- On the positive side, consumers are still estimated to be sitting on excess savings left over from the pandemic, which could cushion some of the impact of the above challenges and may be the reason why the economy is performing somewhat better at this stage of the economic cycle than may have been expected. However, most of those excess savings are held by more affluent people whereas lower income families already spend nearly all their income on essentials such as food, energy and rent/mortgage payments.

PWLB RATES

- Gilt yield curve movements have shifted upwards, especially at the shorter end of the yield curve since our previous forecast but remain relatively volatile. PWLB 5 to 50 years Certainty Rates are, generally, in the range of 4.90% to 5.60%.
- Link view the markets as having built in, already, nearly all the effects on gilt yields of the likely increases in Bank Rate and the elevated inflation outlook.

The balance of risks to the UK economy: -

- The overall balance of risks to economic growth in the UK is to the downside.

Downside risks to current forecasts for UK gilt yields and PWLB rates include: -

- **Labour and supply shortages** prove more enduring and disruptive and depress economic activity (accepting that in the near-term this is also an upside risk to inflation and, thus, the rising gilt yields we have seen of late).
- **The Bank of England** increases Bank Rate too fast and too far over the coming months, and subsequently brings about a deeper and longer UK recession than we currently anticipate.
- **UK / EU trade arrangements** – if there was a major impact on trade flows and financial services due to complications or lack of co-operation in sorting out significant remaining issues.
- **Geopolitical risks**, for example in Ukraine/Russia, China/Taiwan/US, Iran, North Korea and Middle Eastern countries, which could lead to increasing safe-haven flows.
- **A broadening of banking sector fragilities**, which have been successfully addressed in the near-term by central banks and the market generally, but which may require further intervention if short-term interest rates stay elevated for longer than is anticipated.

Upside risks to current forecasts for UK gilt yields and PWLB rates: -

- Despite the recent tightening by 0.5%, the **Bank of England proves too timid** in its pace and strength of increases in Bank Rate and, therefore, allows inflationary pressures to remain elevated for a longer period within the UK economy, which then necessitates Bank Rate staying higher for longer than we currently project.
- **The pound weakens** because of a lack of confidence in the UK Government's fiscal policies, resulting in investors pricing in a risk premium for holding UK sovereign debt.
- Longer-term **US treasury yields** rise strongly if inflation remains more stubborn than the market currently anticipates, pulling gilt yields up higher consequently.
- Projected **gilt issuance, inclusive of natural maturities and QT**, could be too much for the markets to comfortably digest without higher yields compensating.

3. Annual Investment Strategy

The Treasury Management Strategy Statement (TMSS) for 2023/24, which includes the Annual Investment Strategy, was approved by the Council on 23rd February 2023. In accordance with the CIPFA Treasury Management Code of Practice, it sets out the Council's investment priorities as being:

- Security of capital
- Liquidity
- Yield

The Council will aim to achieve the optimum return (yield) on its investments commensurate with proper levels of security and liquidity, aligned with the Council's risk appetite. In the current economic climate, over and above keeping investments short-term to cover cash flow needs, there is a benefit to seek out value available in periods up to 12 months with high credit rated financial institutions, using the Link suggested creditworthiness approach, including a minimum sovereign credit rating and Credit Default Swap (CDS) overlay information.

As shown by the charts below and the interest rate forecasts in section 2, investment rates have improved dramatically during the first quarter of 2023/24 and are expected to improve further as Bank Rate continues to increase over the next few months.

Creditworthiness.

There have been few changes to credit ratings over the quarter under review. However, officers continue to closely monitor these, and other measures of creditworthiness to ensure that only appropriate counterparties are considered for investment purposes.

Investment counterparty criteria

The current investment counterparty criteria selection approved in the TMSS is meeting the requirement of the treasury management function.

Credit Default Swap prices

For UK banks, these have retreated from the spikes caused by the Truss / Kwarteng policy approach in September. Prices are not misaligned with other creditworthiness indicators, such as credit ratings.

Nevertheless, it remains important to undertake continual monitoring of all aspects of risk and return in the current circumstances.

Investment balances

The average level of funds available for investment purposes during the quarter was **£23.4m**. These funds were available on a temporary basis, and the level of funds available was mainly dependent on the timing of precept payments, receipt of grants and progress on the capital programme. The Council holds **£2m** core cash balances for investment purposes (i.e., funds available for more than one year).

Investment performance year to date as of end-June 2023

FINANCIAL YEAR TO QUARTER ENDED 30/6/2023						
	Bank Rate	SONIA	1 mth	3 mth	6 mth	12 mth
High	5.00	4.93	4.94	5.27	5.67	6.06
High Date	22/06/2023	30/06/2023	29/06/2023	30/06/2023	30/06/2023	30/06/2023
Low	4.25	4.18	4.17	4.31	4.46	4.47
Low Date	03/04/2023	04/04/2023	03/04/2023	03/04/2023	06/04/2023	06/04/2023
Average	4.44	4.37	4.46	4.66	4.90	5.08
Spread	0.75	0.75	0.77	0.96	1.21	1.59

FINANCIAL YEAR TO QUARTER ENDED 30/06/2023							
	Bank Rate	SONIA	7 day	30 day	90 day	180 day	365 day
High	5.00	4.93	4.93	4.57	4.38	4.10	3.14
High Date	22/06/2023	30/06/2023	30/06/2023	30/06/2023	30/06/2023	30/06/2023	30/06/2023
Low	4.25	4.18	4.18	4.02	3.81	3.32	2.27
Low Date	03/04/2023	04/04/2023	11/04/2023	03/04/2023	03/04/2023	03/04/2023	03/04/2023
Average	4.44	4.37	4.34	4.27	4.11	3.74	2.70
Spread	0.75	0.75	0.75	0.55	0.57	0.78	0.87

The weighted average rate of return earned on investments for the first quarter of 2023/24 was 4.95%. The comparable performance indicator is the average 7-day SONIA rate, which was 4.34%. The Council's budgeted investment return for 2023/24 is **£589k**, and performance for the year is currently forecast to be **£328k** above budget.

Fund investments

- Money Market Funds (MMFs) – with the increase in the bank rates, the return on MMFs has followed the trend and were around 4.5% at the end of quarter one compared to circa 3.9% at the end of 2022/23.
- Property Funds – despite the value of the property fund declining slightly further from that at the end of March (£1.845m as at 30th June compared to £1.847m as at 31st March), there has been a positive move in the interest return with the Q1 return being 4.38% compared to 4.12% at the end of March.

Approved limits

Officers can confirm that the approved limits within the Annual Investment Strategy were not breached during the quarter ended 30th June 2023.

A full list of investments held as of 30th June 2023 is in Appendix 2.

4. Borrowing

No borrowing was undertaken during the quarter ended 30th June 2023. There is a potential that further borrowing will be undertaken during this financial year to finance the LCC Education Infrastructure, as per the capital programme, should the southern MMDR progress.

PWLB maturity Certainty Rates 1st April to 30th June 2023

Gilt yields and PWLB rates were on a rising trend between 1st April and 30th June.

The 50-year PWLB Certainty Rate target for new long-term borrowing started 2023/24 at 3.30% before increasing to a peak of 3.80% in June. As can be seen, with rates elevated across the whole of the curve, it is advised to not borrow long-term unless the Authority wants certainty of rate and judges the cost to be affordable. (Please also note that from 15th June, HRA borrowing is 0.4% lower than the Certainty Rate)

PWLB RATES 03.04.23 - 30.06.23 (note: the 1st/2nd April was a weekend)

PWLB Certainty Rate Variations 3.4.23 to 30.6.23

HIGH/LOW/AVERAGE PWLB RATES FOR 01.04.23 – 30.06.23

	1 Year	5 Year	10 Year	25 Year	50 Year
Low	4.65%	4.14%	4.20%	4.58%	4.27%
Date	06/04/2023	06/04/2023	06/04/2023	06/04/2023	05/04/2023
High	6.24%	5.71%	5.28%	5.44%	5.23%
Date	28/06/2023	28/06/2023	20/06/2023	30/05/2023	30/05/2023
Average	5.32%	4.87%	4.78%	5.09%	4.82%
Spread	1.59%	1.57%	1.08%	0.86%	0.96%

5. Debt rescheduling

Debt rescheduling opportunities have increased significantly in the current quarter where gilt yields, which underpin PWLB rates and market loans, have risen materially. Members will be advised if there is value to be had by rescheduling or repaying a part of the debt portfolio.

6. Compliance with Treasury and Prudential Limits

The prudential and treasury Indicators are shown in Appendix 1.

It is a statutory duty for the Council to determine and keep under review the affordable borrowing limits. During the quarter ended 30th June 2023, the Council has operated within the treasury and prudential indicators set out in the Council's Treasury Management Strategy Statement for 2023/24. The Director for Corporate Services reports that no difficulties are envisaged for the current or future years in complying with these indicators.

All treasury management operations have also been conducted in full compliance with the Council's Treasury Management Practices.

APPENDIX 1: Prudential and Treasury Indicators for 2023-24 as of 30th June 2023

Treasury Indicators	2023/24 Budget £'000		30.06.23 Actual £'000
Authorised limit for external debt	46,000		46,000
Operational boundary for external debt	34,000		34,000
Gross external debt	31,456		31,456
Investments	16,527		23,960
Net borrowing	14,929		7,496
Maturity structure of fixed rate borrowing - upper and lower limits			
	Lower	Upper	
Under 12 months	0%	50%	0.31%
12 months to 2 years	0%	50%	12.73%
2 years to 5 years	0%	50%	0.96%
5 years to 10 years	0%	50%	0.96%
10 years to 20 years *1	0%	50%	15.92%

Borrower - Funds	Principal (£)	Interest Rate	Start Date	Maturity Date		
CCLA Local Authorities Property Fund	2,000,000	4.38%				
Total Investments	£23,960,000	4.91%				
Total Investments - excluding Funds	£21,960,000	4.95%				0.028%
Total Investments - Funds Only	£2,000,000	4.38%				

Note: An historic risk of default is only provided if a counterparty has a counterparty credit rating and is not provided for an MMF or USDBF, for which the rating agencies provide a fund rating. The portfolio's historic risk of default therefore measures the historic risk of default attached only to those investments for which a counterparty has a counterparty credit rating and also does not include investments which are not rated.
