Treasury Management Update
Quarter Ended 31st December 2024

The CIPFA (Chartered Institute of Public Finance and Accountancy) Code of Practice for Treasury Management 2021 recommends that members be updated on treasury management activities at least quarterly. This report, therefore, ensures this Council is implementing best practice in accordance with the Code.

1. Economics update – provided by MUFG Corporate Markets (the Council's Treasury Advisors)

- The third quarter of 2024/25 (October to December) saw:
  - GDP growth contracting by 0.1% m/m in October following no growth in the quarter ending September;
  - The 3myy rate of average earnings growth increase from 4.4% in September to 5.2% in October;
  - CPI inflation increase to 2.6% in November;
  - Core CPI inflation increase from 3.3% in October to 3.5% in November;
  - The Bank of England cut interest rates from 5.0% to 4.75% in November and hold them steady in December.
  - 10-year gilt yields starting October at 3.94% before finishing up at 4.57% at the end of December (peaking at 4.64%).
- The 0.1% m/m fall in GDP in October was the second such decline in a row and meant that GDP would need to rise by 0.1% m/m or more in November and December, for the economy to grow in Q4 as a whole rather than contract. With on-going concern over the impact of the October budget and drags from higher interest rates and weak activity in the euro zone, our colleagues at Capital Economics have revised down their forecast for GDP growth in 2025 to 1.3% (it was initially 1.8% in the immediate wake of the Budget.)
- This quarter saw the composite activity Purchasing Manager Index (PMI) dip below the level of 50 that separates expansion from contraction for the first time since October 2023. Although December's composite PMI came in above this level, at 50.5, this was still consistent with the 0% rise in real GDP in Q3 being followed by a flat-lining, or potential contraction, in the final quarter of 2024. However, the economy is unlikely to be quite as weak as that given that the PMIs do not capture rises in government spending, but the data does underline the continued divergence in trends between the manufacturing and services sectors. The manufacturing PMI fell for its fourth consecutive month in December, from 48.0 in November to 47.3. That's consistent with manufacturing output falling by 1.5% q/q in the final quarter of 2024 after flatlining through the summer months. This weakness in the manufacturing sector was offset by a rebound in the services sector. The services PMI rose from 50.8 in November to 51.4 in December, which is consistent with non-retail services output growth increasing from +0.1% q/q to +0.3% for October - December. This suggests that more of the recent slowdown in GDP is being driven by the weakness in activity overseas rather than just domestic factors. Additionally, the services output prices balance rose for the third consecutive month, from 55.4 in November to 56.9, showing signs that price pressures are reaccelerating.
- After rising by 1.4% q/q in July - September, the retail sector had a difficult final quarter of the year. Indeed, the bigger-than-expected 0.7% m/m fall in retail sales in October (consensus forecast -0.3% m/m) suggested that households' concerns about expected tax rises announced in the Budget on 30th October contributed to weaker retail spending at the start of the quarter. The monthly decline in retail sales volumes in October was reasonably broad based, with sales in five of the seven main sub sectors slipping. However, the potential for seasonally adjusted sales to rise in November - if October's figures were impacted by the timing of the school half term – combined with a rebound in consumer confidence and rising real incomes, points to some promise to the final quarter of 2024
- The Government's October budget outlined plans for a significant £41.5bn (1.2% of GDP) increase in taxes by 2029/30, with £25bn derived from a 1.2% rise in employers' national insurance contributions. The taxes are more than offset by a £47bn (1.4% of GDP) rise in current (day-to-day) spending by 2029/30 and a £24.6bn (0.7% of GDP) rise in public investment, with the latter being more than funded by a £32.5bn (1.0% of GDP) rise in public borrowing. The result is that the Budget loosens fiscal policy relative to the previous

government's plans - although fiscal policy is still being tightened over the next five years – and that GDP growth is somewhat stronger over the coming years than had previously been forecasted. By way of comparison, the Bank of England forecasts four-quarter GDP growth to pick up to almost 1¾% through 2025 (previously forecast to be 0.9%) before falling back to just over 1% in 2026.

- December's pay data showed a rebound in wage growth that will likely add to the Bank of England's inflationary concerns. The 3myy rate of average earnings growth increased from 4.4% in September (revised up from 4.3%) to 5.2% in October (consensus forecast 4.6%) and was mainly due to a rebound in private sector pay growth from 4.6% to 5.4%. Excluding bonuses, public sector pay stagnated in October and the 3myy rate fell from 4.7% to 4.3%.
- The number of job vacancies also fell again from 828,000 in the three months to October to 818,000 in the three months to November. This marks the first time it has dropped below its pre-pandemic February 2020 level of 819,000 since May 2021. Despite this, the Bank of England remains concerned about the inflationary influence of high wage settlements as well as the risk of a major slowdown in labour market activity.
- CPI inflation has been on the rise this quarter, with the annual growth rate increasing from 1.7% in September to 2.3% in October, before rising further to 2.6% in November. Although services CPI inflation stayed at 5.0% in November, the Bank had expected a dip to 4.9%, while the timelier three-month annualised rate of services CPI rose from 5.0% to 5.1%. That shows that there currently isn't much downward momentum. Moreover, the wider measure of core CPI inflation rose from 3.3% to 3.5% in November. Both services and core inflation are currently at rates well above those consistent with the 2.0% target and are moving in the wrong direction. Capital Economics forecast that after dipping to 2.5% in December, CPI inflation will rise further in January, perhaps to 2.8%. Although CPI inflation is expected to be back at close to the 2.0% target by the end of 2025, given that a lot of the rise in inflation in the coming months will be due to base effects that won't persist, the potential for a broader set of tariffs to arise from the US as well as the constant threat of geo-political factors to impact energy and food prices suggest risks remain very much to the upside.
- Throughout the quarter gilt yields have risen. The 10-year gilt yield increased from 3.94% at the start of October to 4.57% by the year end (and has subsequently risen to 4.64% early in 2025). As recently as mid-September 10-year gilt yields were at their low for the financial year, but since then, and specifically after the Budget at the end of October, yields have soared. Overall, the reaction to the UK Budget highlights how bond markets are both fragile and highly attentive to news about the fiscal outlook.

  The FTSE 100 started off this quarter at 8,276, before finishing up at 8,121. In particular, UK markets have continued to fall further behind US equities, a trend which has accelerated since Trump's election victory in November, partly due to the UK stock market being less exposed to AI hype, and it being weighed down by its relatively large exposure to the energy and materials sectors.

MPC meetings: 7th November & 18th December 2024

- On 7 November, Bank Rate was cut by 0.25% to 4.75%. The vote was 8-1 in favour of the cut, but the language used by the MPC emphasised "gradual" reductions would be the way ahead with an emphasis on the inflation and employment data releases, as well as geo-political events.
- At the 18 December meeting, another split vote arose. Members voted 6-3 to keep Bank Rate on hold at 4.75%, but dissenters (Dhingra, Ramsden and Taylor) were keen for rates to be cut further as concerns over the slowing down of the UK economy took root, despite near-term inflation fears remaining.
- The MPC again stated that "a gradual approach" to rate cuts "remains appropriate" and that policy will "remain restrictive for sufficiently long".

2. Interest rate forecasts

The Council has appointed Link Group as its treasury advisors and part of their service is to assist the Council to formulate a view on interest rates. The PWLB rate forecasts below are based on the Certainty Rate (the standard rate minus 20 bps) which has been accessible to most authorities since 1st November 2012. For Housing Revenue Account authorities, the lower Housing Revenue Account (HRA) PWLB rate has also been available since 15 June 2023 (standard rate minus 60 bps) but is available for HRA borrowing only.

The latest forecast, updated on 11th November, sets out a view that both short and long-dated interest rates will start to fall once it is evident that the Bank of England has been successful in squeezing excess inflation out of the economy, despite a backdrop of stubborn inflationary factors and a tight labour market.

Following the 30th October Budget, the outcome of the US Presidential election on 6th November, and the 25bps Bank Rate cut undertaken by the Monetary Policy Committee (MPC) on 7th November, we significantly revised our central forecasts for the first time since May. In summary, our Bank Rate forecast is now 50bps – 75bps higher than was previously the case, whilst our PWLB forecasts have been materially lifted to not only reflect our increased concerns around the future path of inflation, but also the increased level of Government borrowing over the term of the current Parliament.

If we reflect on the 30th October Budget, our central case is that those policy announcements will be inflationary, at least in the near-term. The Office for Budgetary Responsibility and the Bank of England concur with that view. The latter have the CPI measure of inflation hitting 2.5% y/y by the end of 2024 and staying sticky until at least 2026. The Bank forecasts CPI to be 2.7% y/y (Q4 2025) and 2.2% (Q4 2026) before dropping back in 2027 to 1.8% y/y.

The anticipated major investment in the public sector, according to the Bank, is expected to lift UK real GDP to 1.7% in 2025 before growth moderates in 2026 and 2027. The debate around whether the Government's policies lead to a material uptick in growth primarily focus on the logistics of fast-tracking planning permissions, identifying sufficient skilled labour to undertake a resurgence in building, and an increase in the employee participation rate within the economy.

There are inherent risks to all the above. The worst-case scenario would see systemic blockages of planning permissions and the inability to identify and resource the additional workforce required to deliver large-scale IT, housing and infrastructure projects. This would lead to upside risks to inflation, an increased prospect of further Government borrowing & tax rises, and a tepid GDP performance.

Our central view is that monetary policy is sufficiently tight at present to cater for some further moderate loosening, the extent of which, however, will continue to be data dependent. We forecast the next reduction in Bank Rate to be made in February and for a pattern to evolve whereby rate cuts are made quarterly and in keeping with the release of the Bank's Quarterly Monetary Policy Reports (February, May, August and November). Any movement below a 4% Bank Rate will, nonetheless, be very much dependent on inflation data in the second half of 2025.

Regarding our PWLB forecast, the short to medium part of the curve is forecast to remain elevated over the course of 2025, and the degree to which rates moderate will be tied to the arguments for further Bank Rate loosening or otherwise. The longer part of the curve will also be impacted by inflation factors, but there is also the additional concern that with other major developed economies such as the US and France looking to run large budget deficits there could be a glut of government debt issuance that investors will only agree to digest if the interest rates paid provide sufficient reward for that scenario.

Moreover, Donald Trump's victory in the US President election paves the way for the introduction/extension of tariffs that could prove inflationary whilst the same could be said of any further tax cuts and an expansion of the current US budget deficit.

Invariably the direction of US Treasury yields in reaction to his core policies will, in all probability, impact UK gilt yields. So, there are domestic and international factors that could impact PWLB rates whilst, as a general comment, geo-political risks abound.

In summary, regarding PWLB rates, movement in the short-end of the curve is expected to reflect Link's Bank Rate expectations to a large degree, whilst medium to longer-dated PWLB rates will remain influenced not only by the outlook for inflation, domestically and globally, but also by the market's appetite for significant gilt issuance (£200bn+ for each of the next few years). As noted at the Link November Strategic Issues webinars, there is upside risk to that part of our forecast despite the Debt Management Office skewing its issuance to the shorter part of the curve.

Link Group Interest Rate View	11.11.24												
	Dec-24	Mar-25	Jun-25	Sep-25	Dec-25	Mar-26	Jun-26	Sep-26	Dec-26	Mar-27	Jun-27	Sep-27	Dec-27

- Money market yield forecasts are based on expected average earnings by local authorities for 3 to 12 months.
- The Link forecast for average earnings are averages i.e., rates offered by individual banks may differ significantly from these averages, reflecting their different needs for borrowing short-term cash at any one point in time.

3. Annual Investment Strategy

The Treasury Management Strategy Statement (TMSS) for 2024/25, which includes the Annual Investment Strategy, was approved by the Council on 8th February 2024. In accordance with the CIPFA Treasury Management Code of Practice, it sets out the Council's investment priorities as being:

- Security of capital
- Liquidity
- Yield

The Council will aim to achieve the optimum return (yield) on its investments commensurate with proper levels of security and liquidity, aligned with the Council's risk appetite. In the current economic climate, over and above keeping investments short-term to cover cash flow needs, there is a benefit to seeking out value available in periods up to 12 months with high credit rated financial institutions, using the Link suggested creditworthiness approach, including a minimum sovereign credit rating and Credit Default Swap (CDS) overlay information.

As shown by the charts below and the interest rate forecasts in section 2, investment rates have remained relatively elevated during the third quarter of 2024/25 but are expected to fall back in due course if inflation falls through 2025 and the MPC loosens monetary policy more substantially.

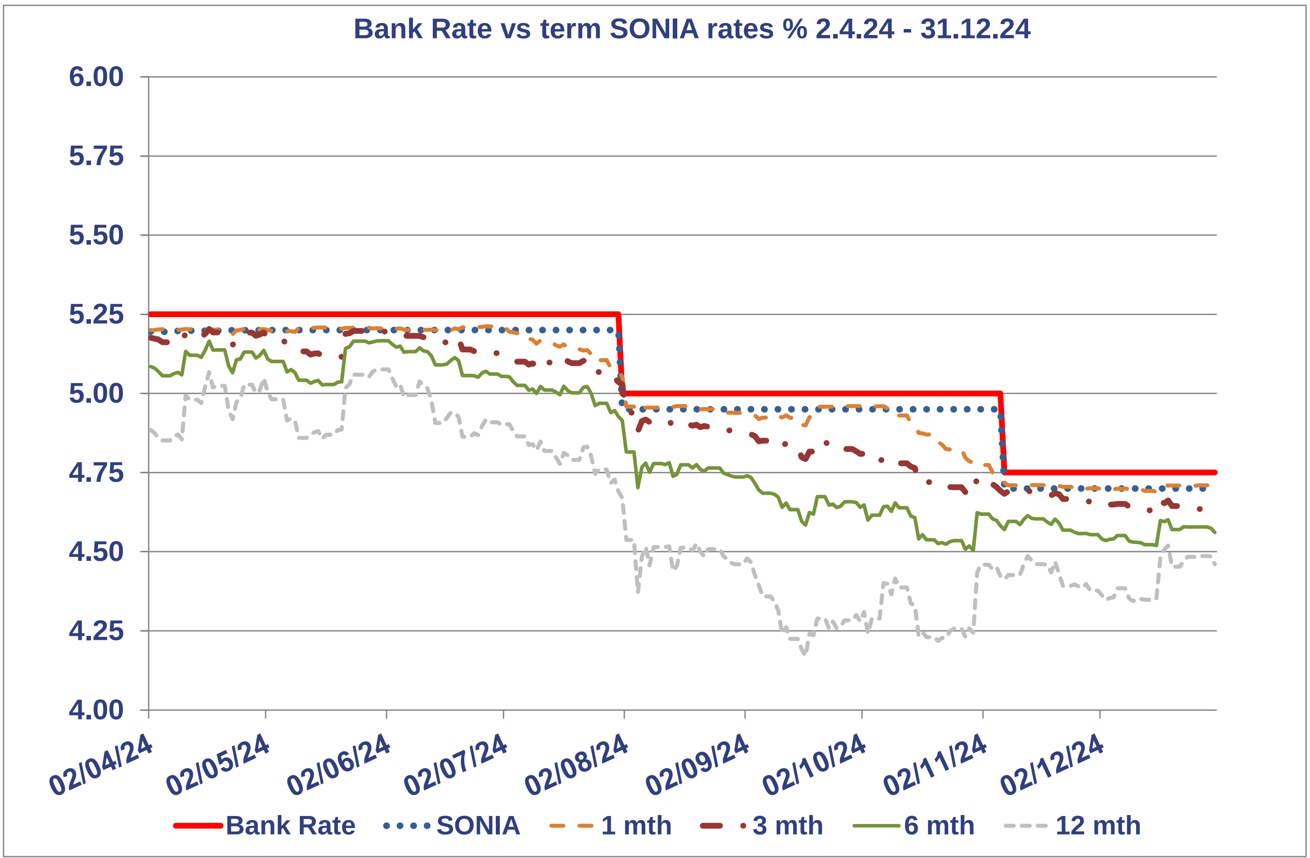
Creditworthiness.
There have been few changes to credit ratings over the quarter under review. However, officers continue to closely monitor these, and other measures of creditworthiness to ensure that only appropriate counterparties are considered for investment purposes.

Investment counterparty criteria
The current investment counterparty criteria selection approved in the TMSS is meeting the requirement of the treasury management function.

CDS prices
For UK and international banks, these have remained low, and prices are not misaligned with other creditworthiness indicators, such as credit ratings. **Nevertheless, it remains important to undertake continual monitoring of all aspects of risk and return in the current circumstances.**

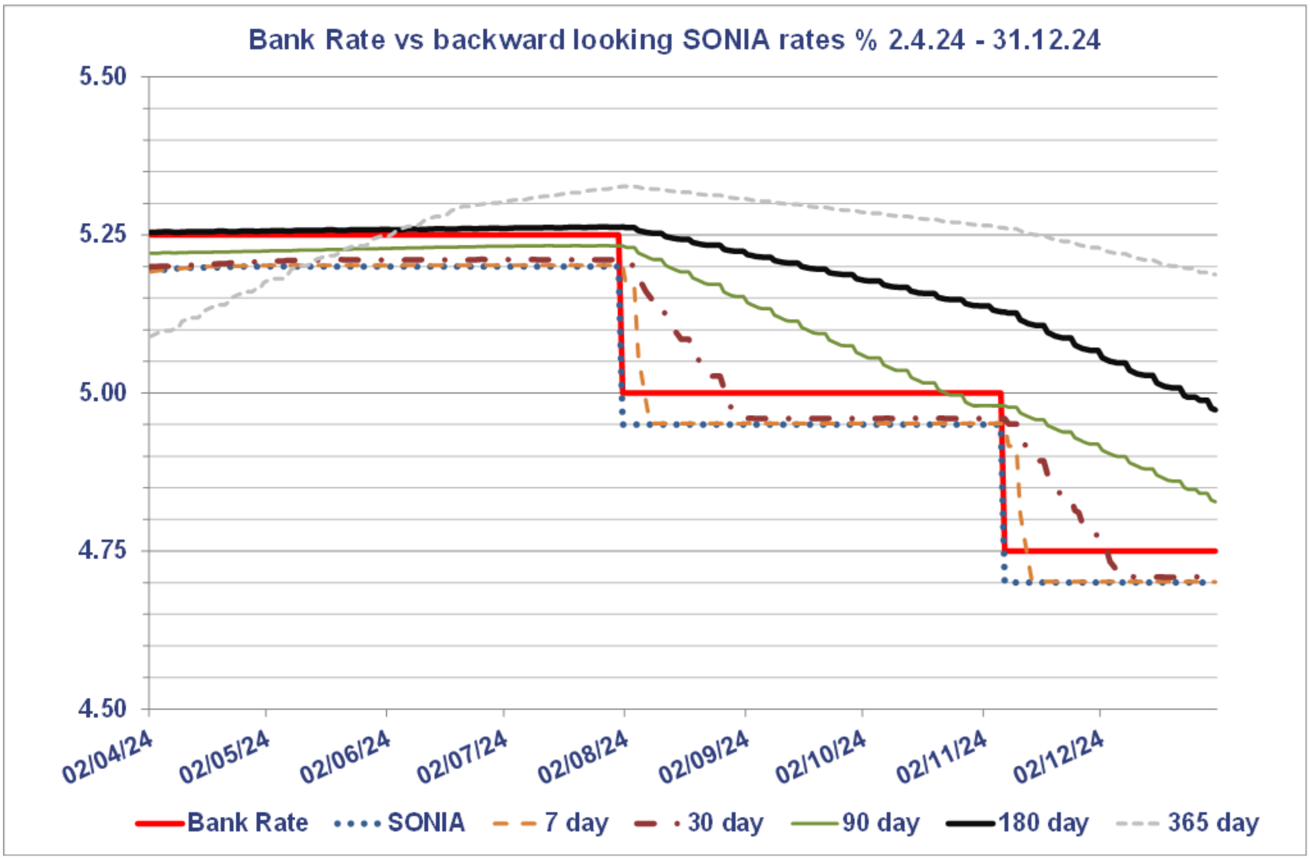
Investment balances
The average level of funds available for investment purposes during the quarter was **£23.6m**. These funds were available on a temporary basis, and the level of funds available was mainly dependent on the timing of precept payments, receipt of grants and progress on the capital programme. The Council holds **£2m** core cash balances for investment purposes (i.e., funds available for more than one year).

Investment performance year to date as of end of December 2024



FINANCIAL YEAR TO QUARTER ENDED 31/12/2024

	Bank Rate	SONIA	1 mth	3 mth	6 mth	12 mth
High	5.25	5.20	5.21	5.20	5.17	5.08
High Date	02/04/2024	03/05/2024	27/06/2024	17/04/2024	31/05/2024	30/05/2024
Low	4.75	4.70	4.69	4.62	4.50	4.17
Low Date	07/11/2024	07/11/2024	16/12/2024	31/12/2024	30/10/2024	17/09/2024
Average	5.06	5.01	4.99	4.93	4.83	4.62
Spread	0.50	0.50	0.52	0.58	0.66	0.91



FINANCIAL YEAR TO QUARTER ENDED 31/12/2024							
	Bank Rate	**SONIA**	**7 day**	**30 day**	**90 day**	**180 day**	**365 day**
High	5.25	5.20	5.20	5.21	5.23	5.26	5.33
High Date	02/04/2024	03/05/2024	13/05/2024	26/06/2024	26/07/2024	26/07/2024	01/08/2024
Low	4.75	4.70	4.70	4.71	4.83	4.97	5.09
Low Date	07/11/2024	07/11/2024	27/12/2024	11/12/2024	31/12/2024	31/12/2024	02/04/2024
Average	5.06	5.01	5.02	5.05	5.12	5.20	5.25
Spread	0.50	0.50	0.50	0.50	0.41	0.29	0.24

The weighted average rate of return earned on investments for the financial year to 31st December 2024 was 5.16%. The comparable performance indicator is the average 7-day SONIA rate, which was 5.02%.

The Council's budgeted investment return for 2024/25 is **£940k** (across both General Fund and HRA), and performance for the year based on Q3 data is currently forecasting a surplus of **£258k** above budget.

Fund investments

- Money Market Funds (MMFs) – with bank rates falling during the last quarter, the return on MMFs has followed the trend and sits at around 4.75% at the end of quarter three.
- Property Funds - the Council's investment in the CCLA property fund is still showing a notional loss against the initial investment of £2m. At 31st December 2024 the fund was valued at £1.823m, which does reflect an improvement of £26k over the last quarter. The interest return for Q3, net of fees, has remained steady at 4.45% compared to 4.44% in the previous quarter.

Approved limits

Officers can confirm that the approved limits within the Annual Investment Strategy were not breached during the quarter ended 31st December 2024.

A full list of investments held as of 31st December 2024 is in appendix 2.

4. Borrowing

No borrowing was undertaken during the quarter ended 31st December 2024**.** It is not anticipated that any borrowing will be undertaken during the remainder of this financial year.

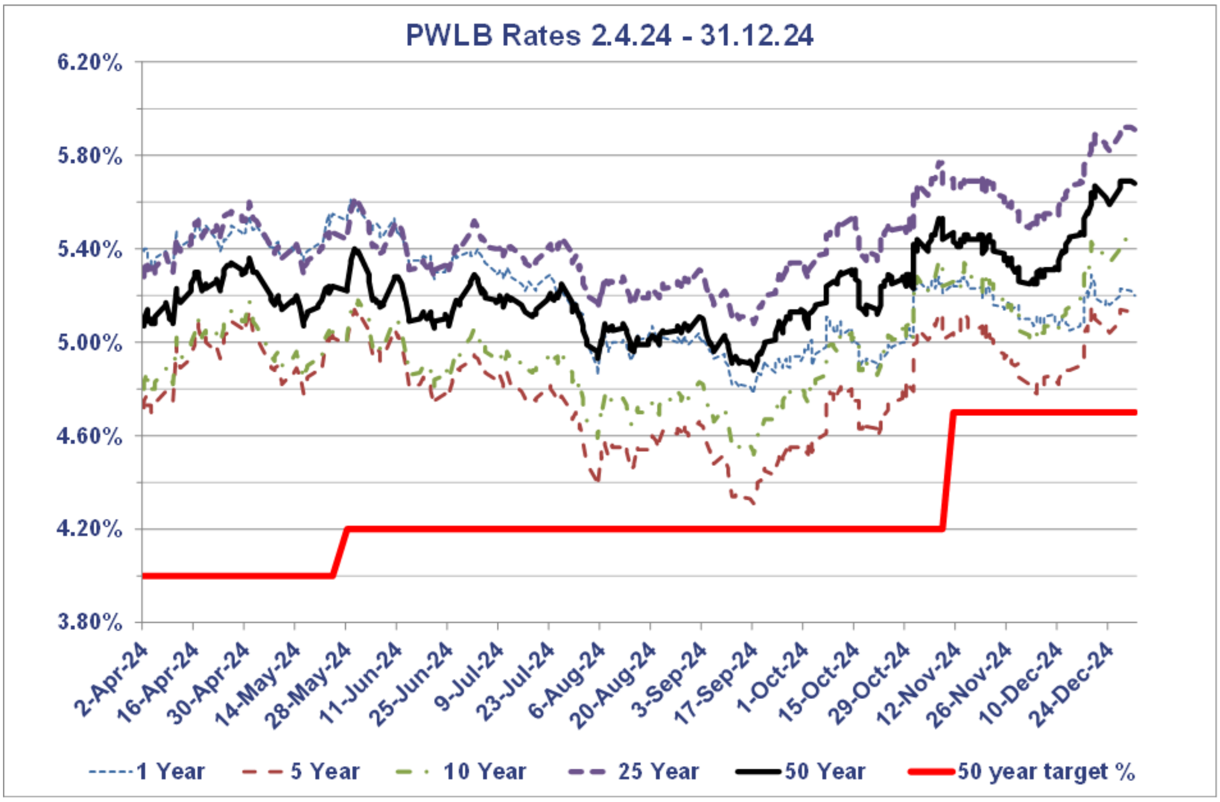
PWLB maturity Certainty Rates 1st April to 31st December 2024
Medium and longer-dated gilt yields, and therein PWLB rates, have moved significantly higher over the course of the financial year, culminating in long-term rates approaching levels last seen in 1998. The rise in medium to long-term yields has arisen because of several factors. Namely, the inflation outlook has become stickier than the market anticipated earlier in the year, with wages remaining somewhat elevated (currently increases are c5% y/y) and the labour market tight (unemployment a little above 4% and job vacancies more than 800,000).

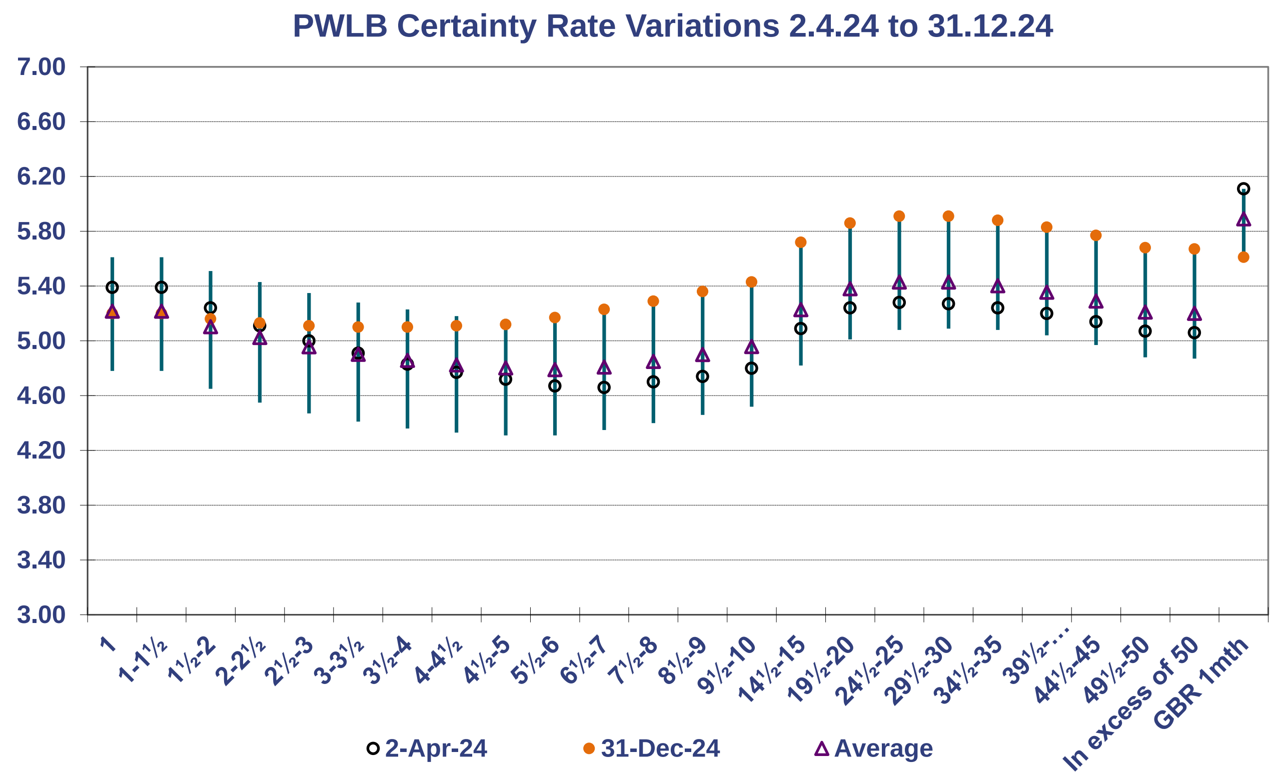
Moreover, the Government has not fully convinced the markets that the UK economy is about to undergo a material increase in productivity and growth. The quarter ending 30th September saw UK GDP stagnate and the prospects for 2025 are somewhat opaque at present. With the UK public finances seemingly under pressure too (as of 7th January, it is estimated that the Chancellor's October Budget contingency is less than £1bn following the recent rise in gilt yields), and historic buyers of longer-dated gilts – pension funds and insurance companies – targeting shorter-dated maturities of late, it is not that great a surprise that yields have risen in the longer dates even as the Debt Management Office has sought to issue debt with shorter durations than might normally have been the case.

There is also anecdotal evidence that hedge funds, who are not long-term holders of long-dated debt issuance, as a rule, may be more active in this part of the market than has normally been the case. Their presence, arguably, adds volatility to the equation. Consequently, and pulling all these factors together, and it is clear that any signs of public finance weakness could lead to elevated yields from time to time.

Additionally, US Treasury yields have also risen prior to Donald Trump's inauguration as US President on 20th January. Markets are nervous as to what the effect of deportation, tariff and tax-cutting policies will have on inflation. Given the impact US markets have globally, this is another contributing factor to the near-term rise in UK yields. The hope is that when the "unknowns" become known, markets will behave in a calmer fashion and yields fall back. But that is not certain.

PWLB RATES 02.04.24 - 31.12.24 (note: the 1st April was a bank holiday)





HIGH/LOW/AVERAGE PWLB RATES FOR 02.04.24 – 31.12.24

	1 Year	5 Year	10 Year	25 Year	50 Year
02/04/2024	5.39%	4.72%	4.80%	5.28%	5.07%
31/12/2024	5.20%	5.12%	5.43%	5.91%	5.68%

High date	29/05/2024	19/12/2024	19/12/2024	19/12/2024	27/12/2024
Average	5.22%	4.80%	4.96%	5.43%	5.21%
Spread	0.83%	0.85%	0.92%	0.84%	0.81%

5. Debt rescheduling

Debt rescheduling opportunities have remained a possibility in the current quarter for those authorities with significant surplus cash and a flat or falling Capital Financing Requirement in future years. Members will be advised if there is value to be had by rescheduling or repaying a part of the debt portfolio.

6. Compliance with Treasury and Prudential Limits

The prudential and treasury Indicators are shown in Appendix 1.

It is a statutory duty for the Council to determine and keep under review the affordable borrowing limits. During the quarter ended 31st December 2024, the Council has operated within the treasury and prudential indicators set out in the Council's Treasury Management Strategy Statement for 2024/25. The Director for Corporate Services reports that no difficulties are envisaged for the current or future years in complying with these indicators.

All treasury management operations have also been conducted in full compliance with the Council's Treasury Management Practices.

APPENDIX 1: Prudential and Treasury Indicators for 2024-25 as of 31st December 2024

Treasury Indicators	2024/25 Budget £'000	31.12.24 Actual £'000
Authorised limit for external debt	46,000	46,000
Operational boundary for external debt	34,000	34,000

Note: An historic risk of default is only provided if a counterparty has a counterparty credit rating and is not provided for an MMF or USDBF, for which the rating agencies provide a fund rating. The portfolio's historic risk of default therefore measures the historic risk of default attached only to those investments for which a counterparty has a counterparty credit rating and also does not include investments which are not rated.
The Historic Risk of Default column is based on the lowest long term rating. If clients are using this % for their Expected Credit Loss calculation under IFRS 9, please be aware that the Code does not recognise a loss allowance where the counterparty is central government or a local authority since relevant statutory provisions prevent default. For these instruments, the Expected Credit Loss will be nil. Please note that we are currently using Historic Default Rates from 1990-2023 for Fitch, 1983-2023 for Moody's and 1981 to 2023 for S&P.
Where Link Group have provided a return for a property fund, that return covers the 12 months to September 2024, which are the latest returns currently available.
